Author Index

Abdul Ghani, A. G.	A computational and experimental study of heating and cooling cycles during thermal sterilization of liquid foods in pouches using CFD	1–9
Abou-Chakra, H.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Abou-Chakra, H.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Aleem, H.	Pharmaceutical process validation: an overview	141–151
Aleem, H.	Reinterpreting validation	287–293
Asako, Y.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
Banim, R. S.	Application of inverse methods to temperature measurement in internal mixers	295–306
Bankes, A.	Development of a piezoelectric force sensor for a chip refiner	133–140
Bansal, P. K.	Feasibility of air cycle systems for low-temperature refrigeration applications with heat recovery	267–274
Barton, D. C.	Coupled thermomechanical simulation of the polymer die drawing process	123–132
Berry, R. J.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Bohan, M. F. J.	Film thickness prediction in halftone screen printing	345–359
Bradley, M. S. A.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Bradley, M. S. A.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Brett, P. N.	Application of inverse methods to temperature measurement in internal mixers	295–306
Bridle, I.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Bridle, I.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Cammarata, L.	Designing an optimal controller for rectangular natural circulation loops	171–180
Chen, X. D.	A computational and experimental study of heating and cooling cycles during thermal sterilization of liquid foods in pouches using CFD	1–9
Claypole, T. C.	An experimental investigation into ink transfer using a roller squeegee in high-speed screen printing	307–321
Claypole, T. C.	Film thickness prediction in halftone screen printing	345–359
Crawford, N. M.	Prediction of pressure drop for turbulent fluid flow in 90° bends	153–156
Cunningham, G.	Prediction of pressure drop for turbulent fluid flow in 90° bends	153–156
Davies, C. E.	An acoustic method for in-line particle size measurement in flowing bulk solids	33–40
Epstein, N.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
Falope, G. B. O.	Modelling ductile failure propagation during blowdown under localized jet fire attack	93–102
Farid, M. M.	A computational and experimental study of heating and cooling cycles during thermal sterilization of liquid foods in pouches using CFD	1–9
Fichera, A.	Designing an optimal controller for rectangular natural circulation loops	171–180
Fox, I. J.	An experimental investigation into ink transfer using a roller squeegee in high-speed screen printing	307–321
Fox, I. J.	Film thickness prediction in halftone screen printing	345–359
Gethin, D. T.	An experimental investigation into ink transfer using a roller squeegee in high-speed screen printing	307–321
Gethin, D. T.	Film thickness prediction in halftone screen printing	345–359
Grace, J. R.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
Hammoud, A. H.	Performance of a rotating drum skimmer in oil spill recovery	49–57
Harkin-Jones, E. M. A.	Plug force monitoring for the control and optimization of the thermoforming process	181–188
Harron, G. W.	Plug force monitoring for the control and optimization of the thermoforming process	181–188
Hasan, M. M.	Skewed velocity profile effect on turbine flowmeter performance	25–32
Hinds, M.	Application of inverse methods to temperature measurement in internal mixers	295–306
Islam, M. M.	Skewed velocity profile effect on turbine flowmeter performance	25–32
Jewell, E. H.	An experimental investigation into ink transfer using a roller squeegee in high-speed screen printing	307–321
Khalil, M. F.	Performance of a rotating drum skimmer in oil spill recovery	49–57
Kirkegaard, M.	An acoustic method for in-line particle size measurement in flowing bulk solids	33–40
Kovacevic, A.	Opportunities for innovation with screw compressors	157–170
Leaper, M. C.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Leaper, M.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Lee, D. H.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
León, F.	Thermomechanical analysis of a piercing mandrel for the production of seamless steel tubes	337–344
Li, F.	Mechanical behaviour of powders using a medium pressure flexible boundary cubical triaxial tester	233–242
Lord, S.	Pharmaceutical process validation: an overview	141–151

Lord, S. V.	Reinterpreting validation	287–293
Mahgerefteh, H.	Modelling ductile failure propagation during blowdown under localized jet fire attack	93–102
Maroño, R.	Thermomechanical analysis of a piercing mandrel for the production of seamless steel tubes	337–344
Martin, P. J.	Plug force monitoring for the control and optimization of the thermoforming process	181–188
Mba, D.	Mechanical evolution of the rotating biological contactor into the 21st century	189–220
McCarthy, T.	Pharmaceutical process validation: an overview	141–151
McCarthy, T. J.	Reinterpreting validation	287–293
Mirza, M. S.	Coupled thermomechanical simulation of the polymer die drawing process	123–132
Nagahashi, Y.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
Novozhilov, V.	Some aspects of the mathematical modelling of fireballs	103–122
Ouellet, D.	Development of a piezoelectric force sensor for a chip refiner	133–140
Pagano, A.	Designing an optimal controller for rectangular natural circulation loops	171–180
Parkinson, H. J.	Analysis and taxonomy of remanufacturing industry practice	243–256
Prince, J. C.	Thermomechanical analysis of a piercing mandrel for the production of seamless steel tubes	337–344
Puri, V. M.	Mechanical behaviour of powders using a medium pressure flexible boundary cubical triaxial tester	233–242
Reed, A. R.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Reed, A. R.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Senger, J.	Development of a piezoelectric force sensor for a chip refiner	133–140
Seshadri, V.	Skewed velocity profile effect on turbine flowmeter performance	25–32
Sharratt, P. M.	Pharmaceutical process validation: an overview	141–151
Sharratt, P. N.	Reinterpreting validation	287–293
Siadat, A.	Development of a piezoelectric force sensor for a chip refiner	133–140
Sii, H. S.	A design-decision support framework for evaluation of design options/proposals using a composite structure methodology based on the approximate reasoning approach and the evidential reasoning method	59–76
Singh, S. N.	Skewed velocity profile effect on turbine flowmeter performance	25–32
Smitj, I. K.	Opportunities for innovation with screw compressors	157–170
Spedding, P. L.	Prediction of pressure drop for turbulent fluid flow in 90° bends	153–156
Spengler, J. D.	Air quality in aircraft	323–335
Stevenson, D. G.	A review of current and developing potable water treatment processes	11–23
Stosic, N. M.	Opportunities for innovation with screw compressors	157–170
Tallon, S.	An acoustic method for in-line particle size measurement in flowing bulk solids	33–40
Tan, D. M.	Fire-induced failure of a propane tank: some lessons to be learned	79–92
Taraiya, A. K.	Coupled thermomechanical simulation of the polymer die drawing process	123–132
Thompson, G.	Analysis and taxonomy of remanufacturing industry practice	243–256
Tierney, M. J.	Application of inverse methods to temperature measurement in internal mixers	295–306
Tüzün, U.	An investigation of particle degradation by impact within a centrifugal accelerator type degradation tester	257–266
Tüzün, U.	Measuring the tensile strength of caked sugar produced from humidity cycling	41–47
Venart, J. E. S.	Fire-induced failure of a propane tank: some lessons to be learned	79–92
Wang, J.	A design-decision support framework for evaluation of design options/proposals using a composite structure methodology based on the approximate reasoning approach and the evidential reasoning method	59–76
Ward, I. M.	Coupled thermomechanical simulation of the polymer die drawing process	123–132
Wild, P. M.	Development of a piezoelectric force sensor for a chip refiner	133–140
Williamson, N. J.	Feasibility of air cycle systems for low-temperature refrigeration applications with heat recovery	267–274
Wilson, D. G.	Air quality in aircraft	323–335
Xu, J.	Fire-induced failure of a propane tank: some lessons to be learned	79–92
Yedidiah, S.	An overview of methods for calculating the head of a rotodynamic impeller and their practical significance	221–232
Yokogawa, A.	Effect of liquid addition on heat transfer in gas-fluidized beds of large light particles	279–286
Zhao, Y.	Pharmaceutical process validation: an overview	141–151
Zhao, Y.	Reinterpreting validation	287–293
